

Acknowledgments

First and foremost we would like to thank Ohio EPA and the Ohio Air Quality Development Authority for financial support and guidance on this project. This project was a cooperative research effort involving all academic units at Ohio University and the Environmental Engineering Program at Texas A&M University – Kingsville. Through this research project, and with in-kind support from the institutions, twelve graduate and five undergraduate students participated and most received tuition waivers and stipends. A majority of the graduate students completed their thesis requirements from this project. Special thanks to the following students whose efforts had significant impact on this research: Peg Conley, who received here B.S. degree in Industrial Hygiene. Peg established the QA/QC guidelines for the air monitoring and lab procedures at Ohio University. Peg is currently an Environmental Manager for a private corporation in Utah; Bian Liu, who completed her M.S. in Environmental Studies, was involved with the monitoring and analysis of PM_{2.5} at the elementary schools. Bian is currently working on her PhD at the University of Michigan; Laura Simons, who worked on the data sets and statistical analysis. Laura is currently pursuing her PhD at the University of Georgia; Mayra Alvarado was responsible for the chemical analysis of the PM_{2.5} samples and received an M.S. in Environmental Engineering from Texas A&M University - Kingsville; and Ieesuck Jung conducted the meteorological and trend evaluations and received an M.S. in Environmental Engineering from Texas A&M University - Kingsville.

We would also like to acknowledge the elementary schools involved in this program, Koebel Elementary in the Columbus School district, New Albany Elementary in the New Albany School district and East Elementary in Athens. The project could not have been completed without the support of the local school boards and the Principals. Specifically, we would like to mention the involvement of Principal Denny Boger at East Elementary and Principal Steve Stone at Koebel Elementary who worked with us very closely throughout the project. And most importantly the teachers who were responsible for the day to day operation of the indoor and personal sampling and the health monitoring; Pam Smith at Koebel, Ronald Whitacre at New Albany and Stephanie Purcell at East Elementary.

Finally, we would also like to thank Dr. Ann Fingar and Dr. Robert Woodworth, faculty in the Ohio University College of Osteopathic Medicine, for designing and supervising the medical monitoring section of this project.
