

DRINKING WATER NOTICE

_____ [System] Has Levels of Total Trihalomethanes (TTHMs) Above Drinking Water Standards

Our water system recently violated the maximum contaminant level (MCL) for total trihalomethanes (TTHMs). The average level of TTHMs over the last year was _____ [level and units]. The standard for TTHMs is 0.080 mg/L.

What should I do?

- **You do not need to use an alternative (e.g., bottled) water supply.** However, if you have specific health concerns, consult your doctor.

What does this mean?

The levels detected do not pose an immediate risk to your health. However, some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer.

What is being done?

We are investigating and taking the necessary steps to correct the problem as soon as possible.
