

## Operable Unit 5 (OU5)

Landfill 5, Fire Training Area 1, Burial Site 4, Gravel Lakes Tank Site

Capping was completed at Landfill 5 in Spring 1996. The cap consists of a passive gas collection system, low permeability layers, subsurface drainage layer, and perimeter surface drainage system. The ground water collection and treatment system for the Area C boundary is located adjacent to this site. Long-term monitoring is addressed under the Basewide Monitoring Program. Site investigations indicated remedial actions were not necessary for the other sites within this operable unit.
