

## **[Mound DOE Legacy Management](#)**

### **MMCIC**

Following de-commissioning of the Mound site by the Department of Energy in the early 90's, the City of Miamisburg created the Miamisburg Mound Community Improvement Corporation (MMCIC) to spearhead redevelopment and reuse of the site and to direct the transfer of the site's technologies and facilities to the private sector. The MMCIC, in turn, established the Mound Advanced Technology Center.

### **Mound Reuse Committee (MRC)**

The primary mission of the MRC is to provide public input and informed recommendations and advice to the Mound Community Improvement Corporation (MMCIC), DOE, U. S. and Ohio EPA, the City of Miamisburg, and to other government entities on major issues and decisions related to reuse and cleanup activities at the Mound site. The major focus of the MRC will be to provide public review and comments on cleanup proposals and plans as well as the implementation of site reuse plans and activities. The MRC is dedicated to ensuring meaningful, timely and effective involvement of the public and key stakeholders in decisions regarding the future use and cleanup of the Mound. For questions on the MRC or MMCIC please contact [Lynn Blount](#) at (937)865-4462.

### **Post Closure Stewardship Working Group**

In the later part of 2000, a Post Closure Stewardship Working Group (PCSWG) was formed to review the long-term stewardship issues related to the closure and reuse of the Mound plant.

### **Annual Assessment of the Effectiveness of Institutional Controls**

U.S. DOE and regulators conduct assessments of the effectiveness of institutional controls by conducting a yearly site walkover.

### **U.S. EPA's Mound NPL Fact Sheet**

### **U.S. EPA's Notice of Wetlands Involvement for the Transfer of Land**

### **MESH**

The Miamisburg Environmental Safety and Health citizens activist group worked for many years to ensure an effective cleanup at Mound. Sharon Cowdery, President of MESH, can be reached at (937)748-4757.
