INTRODUCTION

SUMMARY OF PROPOSED LONG-TERM CONTROL PLAN

On Tuesday, May 13, 2008, Mingo Junction Village Council passed a resolution adopting the contents of this long-term control plan (LTCP) document. The Village has committed through this legislation to implement a sewer separation and monitoring project totaling more than $8.8 million to be spent over the next four years. Some early action items as part of the LTCP implementation include:

- Sewer Rate Study.
- Studies involving the Wheeling-Pitt Facilities in relation to the Wastewater Treatment Plant.
- Design phase for the separation of the combined sewers in the Church Hill and Lincoln CSO areas.

All of these early action items noted above are scheduled to begin during July 2008. A complete implementation schedule is contained in the Recommended CSO Control Plan as part of LTCP-EZ.

The village fully understands the financial commitment involved with the LTCP. Officials at the Ohio EPA's Division of Financial Assistance will be contacted concurrent to this submittal regarding the Water Pollution Control Loan Fund. A rate study should be complete before the end of 2008 to help the Village determine the revenues needed to pay back the loan.

Some of the items noted in the April 10, 2008 letter from the Ohio EPA are addressed in this document. The Village senses the urgency to begin the LTCP and proposes to address certain items from the letter during implementation. A detailed response to the letter is contained on the following pages of this introduction.
